ATFS – UPDATED APPLICATIONS

There have been many changes to fluid specifications since the Myths and Legends issue.

New transmissions, requiring new fluids have been released and our own products have been further researched to expand their sphere of application.

Hence, a new application sheet has been made up.

Highlights:

ATF MHP – is now suitable for all Honda automatic transmissions (***Honda ATF 89, 96 and Z1***) and in Japanese CVTs where the vehicle engine capacity is less than 2.0L. Hence, Toyota Prius CVT, Honda Jazz CVT and Honda motor vehicles with conventional automatics are now covered as well as a few others. In addition, ATF MHP is recommended where ***Toyota WS*** is specified. This only applies to product marked as meeting Mitsubishi SP3. Any product **not** marked as “SP3”, should not be used in those transmissions.

ATF DX-VI – just released to market for 6 speed GM automatics, is also recommended for ***ZF 6 speed*** automatic transmissions (6HP series) which are found in BMW, Range Rover, Jaguar, Mercedes Benz, Volkswagen as well as in the new Ford Falcon BF and Territory SY.
