Electrical Guide Format

This Electrical Guide is made up of two major sections. The first section, at the front of the book, provides general information for and about the use of the book, and information and illustrations to aid in the understanding of the Jaguar S-TYPE electrical / electronic systems, as well as the location and identification of components.

The second section includes the Figures, which are the basis of the book. Each Figure is identified by a Figure Number (i.e. Fig. 01.1) and Title, and is accompanied by a page of data containing information specific to that Figure.

It is recommended that the user read through the front section of the book to develop a familiarity with the layout of the book and with the system of symbols and abbreviations used. The Table of Contents should help to guide the user.

Vehicle Identification Numbers (VIN)

VIN ranges are presented throughout the book in the following manner:

→ VIN 123456 indicates "up to VIN 123456"; VIN 123456 → indicates "from VIN 123456 on".

Jaguar S-TYPE Electrical System Architecture

Power Supplies

The Jaguar S-TYPE electrical system is a supply-side switched system. The ignition switch directly carries much of the ignition switched power supply load. Power supply is provided via three methods: direct battery power supply, ignition switched power supply, and "Switched System Power Supply". The "Switched System Power Supply" circuit is controlled via the GECM (General Electronic Control Module) and the RECM (Rear Electronic Control Module). Refer to Figure 01.6 for circuit activation details.

Fuse Boxes

The electrical harness incorporates two hard-wired power distribution fuse boxes: the Front Power Distribution Fuse Box located in the engine compartment and the Rear Power Distribution Fuse Box located in the trunk. A serviceable Primary Junction Fuse Box is located in the front right-hand foot well. All fuses and relays (except the trailer towing accessory kit) are located in the two fuse boxes.

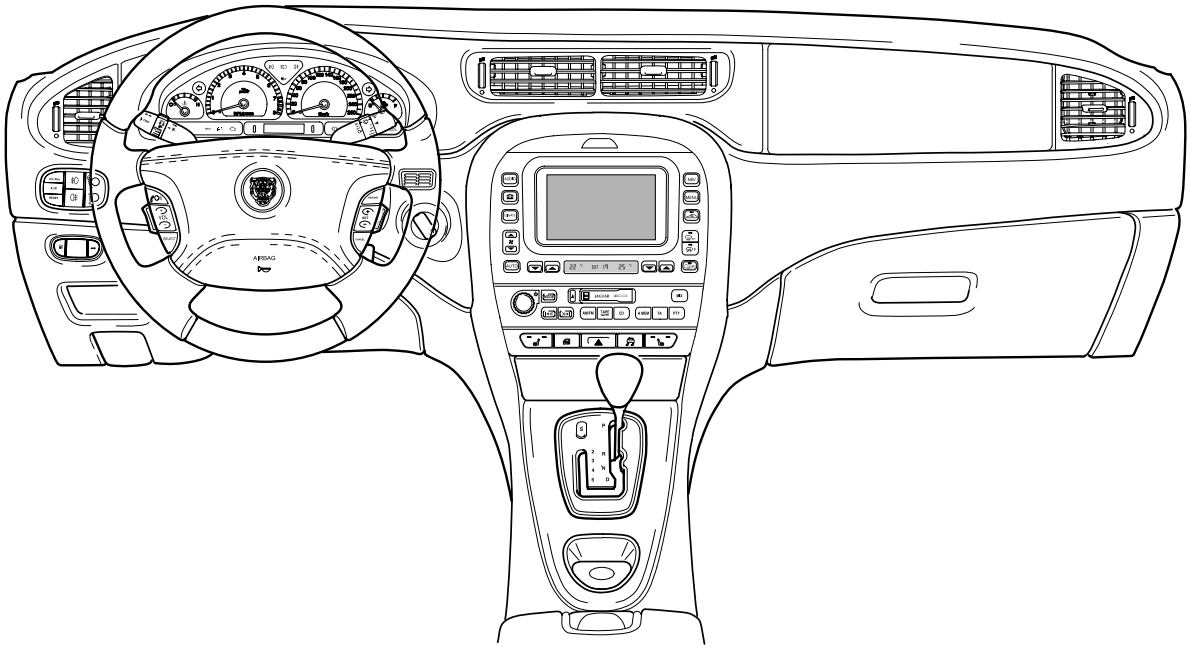
Vehicle Networks

The New Jaguar S-TYPE employs three different networks: a CAN (Controller Area Network) for high-speed power train communications, an SCP (Standard Corporate Protocol) network for slower speed body systems communications, and a D2B (Optical) Network for very high-speed "real-time" audio data transfer. The D2B Network is a fiber optic network with a gateway to the remaining vehicle networks via the Audio Unit. Technician access to the three networks and the Serial Data Link is via the Data Link Connector.

Ground Studs

Circuit ground connections are made at body studs located throughout the vehicle. There are no separate power and logic grounding systems; however, there are a certain number of components that use unique ground points.

S-TYPE INSTRUMENT PANEL



NOTE: In the examples on this page, an 'X' is used where a number would appear on an actual Figure.

Reference Symbols

- X — Battery power supply
- X (I) — Ignition switched auxiliary power supply (key I, II)
- X (II) — Ignition switched power supply (key II, III)
- X (S) — Switched System Power Supply power supply
- X (E) — Engine Management System power supply
- XX.X — Figure number reference
- CAN — Controller Area Network
- SCP — Standard Corporate Protocol network
- D2B — D2B network

Control Module Pin Symbols

- I — Input
- O — Output
- B+ — Battery voltage
- P — Power ground
- \+ — Sensor/signal supply V *
- − — Sensor/signal ground **
- C — CAN network
- S — SCP network
- D2 — D2B network
- D — Serial and encoded data

* May also indicate Reference Voltage.

** May also indicate Reference Ground or Logic Ground. Refer to Control Module Pin-Out Information.

Harness Codes

AC	Climate Control Link
AT	Alarm Link
BF	Front Bumper Harness
BR	Rear Bumper Harness
CA	Cabin Harness
CP	Intercooler Pump Link
CV	Canister Vent Link
DD	Driver Door Harness
DM	Driver Memory Seat Harness
DT	Driver Door Trim Link
FC	Fascia Harness
FH	Front Harness
FL	LH Front Headlamp Link
FP	Fuel Pump Harness
FR	RH Front Headlamp Link
GB	Transmission Harness

PD	Passenger Door
PI	Engine Harness
PN	Passenger Seat Harness
PT	Passenger Door Trim Link
RA	D2B Network Harness
RF	Roof Harness
SL	Solar Sensor Link
SR	Sliding Roof Harness
SW	Subwoofer Link
TT	Trailer Tow Harness

Wiring Color Codes

N	Brown	O	Orange
B	Black	S	Slate
W	White	L	Light
K	Pink	U	Blue
G	Green	P	Purple
R	Red	BRD	Braid
Y	Yellow	BOF	Black fiber optic (D2B Network)

Code Numbering

When numbering connectors, grounds and splices, Jaguar Engineering uses a three-position format: CA001, CA002, etc. Because space is limited in this Electrical Guide the codes have, in most cases, been shortened. Thus CA001-001 becomes CA1-1, CA002-001 becomes CA2-1, etc.

Grounds

On figures where LHD and RHD circuits are combined and the ground designation differs from LHD to RHD, the RHD ground code is shown in parentheses. If the ground designation is the same for LHD and RHD, only one ground code is used, with no parentheses.

EXAMPLE:

Relays

All relays are located in the Front and Rear Power Distribution Boxes and the Primary Junction Fuse Box. Relays do not have a separate relay connector (base). All relays use the ISO pin numbering system (1, 2, 3, 4, 5). Each relay is identified by an "R" number unique only to the fuse box in which it is located.

EXAMPLE:

Fuses

All fuses are located in the Front and Rear Power Distribution Boxes and the Primary Junction Fuse Box. Each fuse is identified by an "F" number unique only to the fuse box in which it is located.

EXAMPLE:

Networks

In most instances, networks are shown as a broken grey line to indicate that there is network communication between the depicted control modules. Refer to Figures 20.1, 20.2, 20.3, 20.4 and 20.5 for circuit details.

This Appendix contains a listing of SCP and CAN Network messages.

NOTE: Passive Anti-Theft System and Security System messages are not included in this appendix.

The following acronyms and abbreviations are used throughout this section:

A/C	Air Conditioning
A/CCM	Air Conditioning Control Module
ADCM	Adaptive Damping Control Module
AIRCON	Climate Control
ASC	Adaptive Speed Control
ASCCM	Adaptive Speed Control Control Module
AT CMD	Commands for configuring and controlling telecommunication devices
AUDIO	Audio Unit
CAL	Calibrate
CAN	Controller Area Network
CID	CAN Identifier
CM	Control Module
CONFIG	Configure
CPCM	Cellular Phone Control Module
D2B OPC	Instructions for translating and routing data for D2B use
D2B	Fiber Optic Network
DDCM	Driver Door Control module
DIAG	Diagnostics (WDS)
DSC	Dynamic Stability Control
DSCCM	Dynamic Stability Control Control Module
DTC	Diagnostic Trouble Code
ECM	Engine Control Module
FL	Front Left
FR	Front Right
Gateway	Device that converts messages between different types of networks
GECM	General Electronic Control Module
HLCM	Headlight Leveling Control Module
IC	Instrument Cluster
ID	Identification
JGM	J Gate Module
LED	Light Emitting Diode
MIL	Malfunction Indicator Lamp
MSG	Message
NCM	Navigation Control Module
ODO	Odometer
PATS	Passive Anti-Theft System
PBCM	Electronic Parking Brake Control Module
PECUS	Programmable Electronic Control Units System
PTT	Push to Talk
RECM	Rear Electronic Control Module
RL	Rear Left
RPM	Revolutions Per Minute
RR	Rear Right
SCLCM	Steering Column Locking Control Module
SCP	Standard Corporate Protocol Network
SMS	Short Message Service for Mobile Communications
STM	Switch to Test Mode
TCM	Transmission Control Module
