

Ford VMM

The Ford® Vehicle Measurement Module (VMM) is a vehicle instrumentation module that aids technicians with non-link based vehicle functions. The VMM can be used with the VCM or the VCM II. When used with either interface, the complete IDS package provides complete dealer-level diagnostic, maintenance, and service coverage. All multimeter and oscilloscope functions and capabilities in the IDS software require the VMM. Some of these include: ignition system tests; fuel pressure tests; fuel leak-down tests; injector flow tests; secondary ignition; and current probe functionality.

The complete IDS package is compatible with the OEM diagnostic software for Ford®, Mazda®, Jaguar®, and Land Rover®.

Kit Contents:

- Vehicle Measurement Module (VMM)
- Battery Cable
- Red & Black Probes
- Probe Tip Adapter Kit #1 - 12 Adapters
- Probe Tip Adapter Kit #2 - 8 Adapters
- Secondary Ignition Cable Set
- Secondary Ignition Transducer Clip Set
- Coil on Plug (CoP) Clip - 4 Clips
- 50 & 500 Amp Current Probes
- Pressure & Vacuum Transducer (PVT)
- Fuel Pressure & Vacuum Adapter Kit
- Transmission Extension Kit
- Self Test Adapter - Port C
- Carrying/Storage Case

Kit shown with optional Vehicle Communication Module (VCM).

Available Options:

- New or Refurbished Dell Latitude Laptop
- New or Refurbished Panasonic ToughBook
- IDS Software Subscription
- VCM or VCM II Diagnostic Kit
