

AJ6 3.6 thermostat housing pipes.

Two hoses exiting rear of thermostat housing. One on left "Ts" into metal pipe linking header tank to radiator. One on right to top of inlet manifold (see below).

Hose from thermostat housing is the lower of the two hoses in centre of pic (see screw slots on top of jubilee clips). The upper hose seems to go to the heater return pipe. My parts manual refers to the unit that both hoses fix to as the "restrictor" but I've no idea what it does.
