

## AUTO HEADLIGHTS WITH WIPERS ON

If the wipers are switched ON via any of the modes, i.e., AUTO, slow or fast, after a delay of 20 seconds then the exterior lights will be switched on. The AUTO headlights mode needs to be selected for this to happen. The exterior headlights will switch off 2 minutes after the wipers are switched off, or will go off straight away if auto lights mode is deselected or the ignition is switched off.

## INTERIOR REAR VIEW MIRROR

New for the 2003 MY, is the addition of the interior mirror with compass. The compass operation is the same as on the S-TYPE (2000-2002 MY).

The interior rear view mirror is of the electro-chromic type, and is operated by control buttons at the base of the mirror. Where electro-chromic door mirrors are fitted, they are operated in conjunction with the interior mirror by the same controls.

## EZ Pass (Electronic Toll Pass)

If you have an EZ pass (Electronic Toll Pass), it is advisable to mount the transmitter on the windscreen about 1 inch (5mm) from the mirror mount and headlining and to the side of the mirror ensuring that it does not cover the forward facing light sensor (see illustration). This also keeps it away from any metal, which may affect its operation. The forward facing light sensor position changes from the left to the right side of the mirror depending whether a compass is fitted or not. Do not move the tag more often than need be as it can affect the calibration of the compass, if fitted.
